

2SD2396

Transistor, NPN

Features

- available in TO-220FN package
- high dc current gain (h_{FE}), typically $h_{FE} = 1000$
- low collector saturation voltage, typically $V_{CE(sat)} = 0.3$ V at $I_C/I_B = 2$ A/ 0.05 A
- large collector power dissipation: $P_C = 30$ W at $T_C = 25^\circ\text{C}$
- easily insulated from the heat sink as the fin is molded
- 2 mm lower than ROHM'S TO-220FP package which allows higher density mounting
- wide safe operating area (SOA)

Applications

- low frequency power amplifier

Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
